

FEA recommendation on reversed epsilon

The Articles 3 and 8 §1.(b) of the Aerosol Dispensers Directive 75/324/EEC require affixing the symbol '3' (wrongly mentioned as 'inverted' epsilon) as proof that the aerosol dispenser satisfies the requirements of the Directive, but does not require specific shape and size.

FEA recommends the following unique layout for the reversed epsilon which is easily identifiable and does not create confusion with other indications in the labelling.

FEA recommends a minimum height of 3 mm.
